

**Ask Jon Eakes**

# **Old jars to hold screws in the shop.**

Last Updated: Monday, January 15th, 2001, Created: Sunday, January 14th, 2001

Frank from Chilliwack, BC suggests saving some of the food jars that we normally recycle, screwing the lids to the bottom side of a shelf and then screwing the jar in -- giving you screw and nail storage that is handy and visible. I would just add, use two screws so that the lid will not rotate on a single screw, and put the lid of a screw box into the jar so you can read the contents from the outside.
