Repairing a metal door

Last Updated: Monday, May 10th, 2010, Created: Wednesday, September 15th, 1999

Charles in Toronto, Ontario has a damaged metal door which had been broken into. He wants to know how to straighten out the metal and repaint the door.

That's actually an easy question. Simply go to an auto supply store and check out what they have in the body shop section. Flatten the problem area, sand it to bare metal and then fill it in smooth with the autobody putties. After simply use a good metal paint.
