Shower head cleaning

Last Updated: Friday, September 15th, 2000, Created: Thursday, September 14th, 2000

Calcium build-up can make a shower a difficult place to get wet. Soaking the shower head in ammonia over night solves the problem. You can do it without even taking the head out of the shower. Just put a vegetable bag full of vinegar over the head and attach it with a rubber band over night, then turn on the shower to rinse it out.
