ARE EARTH-SHELTERED HOUSES PRACTICAL IN CANADA?

Last Updated: Friday, October 15th, 1999, Created: Thursday, October 14th, 1999

Although some experimentation with earth sheltering (burying part of the house underground) is going on in Canada, our soil conditions and frost penetrations make this type of insulation uneconomical. Most earth-sheltered homes are found in the middle and southern areas of the US, where it is used more from summer cooling than for winter heating.
